

Unique Browser Feature Ideas

1. AI-Powered Features

- Page Summary - Automatically summarize any web page using an AI model. Useful for long articles or research content.
- Simplified Explanations - The browser can explain complex text in simpler language. You can choose levels like 'for a 5-year-old' or 'technical summary'.
- Auto Note Generation - While browsing, the browser can generate brief notes and save them. This can help track information across websites.
- On-Page Question Answering - A sidebar lets users ask questions about the current page. AI reads and analyzes the content to answer.
- Goal-Based Browsing - User enters a task (e.g., 'Find top budget phones in India'), and the browser automatically explores and returns results.
- Voice-Based Control - Control the browser using voice commands (e.g., 'Open Gmail', 'Search for hotels in Delhi').
- Developer Support via AI - Ask questions about why certain elements are broken or misaligned. AI analyzes the HTML and CSS to provide debugging help.
- Advanced Translation - Translate text and explain tone, cultural references, or idioms. Helpful for international browsing.

2. Developer and Power-User Tools

- Editable Web Pages - Turn any webpage into an editable surface. Users can write, highlight, or annotate directly on the page.
- DOM Change Tracking - Track changes made to the DOM over time, similar to version control.
- Per-Tab Notes - Each browser tab has a linked notepad that auto-saves with the page.
- API and Network Inspector - A simplified interface for viewing network calls, requests, and API data.
- Request Replayer - Capture and replay any HTTP request from the page. Useful for testing or debugging.
- CSS Editor with Save Feature - Edit CSS live and optionally store those changes for future visits to the same site.

3. Privacy and Security Tools

- Fingerprint Spoofing - Randomizes browser fingerprint to prevent tracking and profiling.
- Time Simulation - Allows websites to see a fake system time or timezone.
- Full Session Isolation - Each tab runs with its own storage, cookies, and sessions-nothing is shared.
- Auto Disposable Emails - Generate a temporary email address on-the-fly for use in forms. Emails can forward to your real address.
- Tracker Visualizer - Shows a real-time map of all tracking scripts, cookies, and data transfers on each page.
- Cookie Consent Blocker - Automatically blocks unnecessary cookies or simulates consent without storing any data.
